

eLabtronics Work Experience Opportunity

eLabtronics is offering internships or industry work experience during the 2011 summer break. Students who wish to apply must do so soon due to the limited placements.

eLabtronics specialises in micro-controller or embedded controls and applications. It is a Gold Master Consultant to Microchip Technology Inc (USA). Its flagship product is ezSystem which makes programming of microcontrollers simpler for students and professional engineers to save time. ezSystem is a graphical program which produces a ONE on ONE assembly language program. It has a Circuit Designer which is an extremely intuitive program to make designing the hardware simpler to reduce weeks of work to hours.

Interns gain Practical, Communication, Business (PCB) and Networking (NW) Skills which they use in their job interviews and scholarship applications successfully.

You can find the eLabtronics company profile and projects at www.elabtronics.com

Please contact the eLabtronics Technical Manager (contact details below) to register your interest or for more information.
